

Instructions for use HUMIN PLUS for Gooseberry

To handle bush recommend the following procedure:

- Soak cuttings (bushes) in a solution 1:500 of HUMIN PLUS and moisten shrub roots before planting with an exposure of at least 10 minutes. (Time critical). Pour on the soil after planting a solution of HUMIN PLUS at a concentration of 1:500. We do not recommend treating the cuttings with other products, if treated with HUMIN PLUS.
- Basal dressing – at a rate of 2 to 4 liters of solution 1:500 for 1 m². Treatment is carried out at least 2 to 3 times in the spring and summer-autumn period.
- On vegetation - 1:1000 solution in the budding phase and again after 10 to 14 days. After harvest treat the vegetation to increase the resistance of plants to winter conditions.
