

Instructions for use HUMIN PLUS for Grape

For the vineyards recommend the following procedure:

- For soaking cuttings: 0.2% solution of HUMIN PLUS to treat cuttings before planting or after planting, water the soil. We do not recommend treating with other products if using HUMIN PLUS.
- Basal dressing - a rate of 7 to 10 l of 0.2% solution under each root. Treatment is carried out at least 2 to 3 times in the spring and summer-autumn period.
- For vegetation - 0.1% solution in phase 5 to 7 leaves in the budding phase. After harvest treat the vegetation to increase the resistance of plants to winter conditions.
