

Instructions for use HUMIN PLUS for Softwoods

For the treatment of softwood we recommend the following procedure:

- When growing softwood seeds recommend a 2% solution of **HUMIN PLUS** to treat seeds before planting or watering the soil after planting. If the seeds are treated with other products, it is recommended to reduce the concentration of **HUMIN PLUS** to 0.2%.
- After germination is recommended to water the plants with 0.2% solution of **HUMIN PLUS** every 2 to 3 weeks at the rate of 0.3 liters per plant increasing the dose as the plant grows.
- Large trees are watered using the calculation: 10 to 15 liters of solution per tree.
- Basal fertilizer can be replaced by spraying 0.1% solution until thoroughly wet.
