

Instructions for use HUMIN PLUS for Strawberries

For processing strawberries we recommend the following procedure:

- Soaking before planting shrubs: 1:500 HUMIN PLUS solution to moisten the roots before planting shrubs with an exposure of at least 10 minutes, **(Time Critical)** and pour on the soil after planting a solution at a concentration of 1:500. We do not recommend treating bushes with other products if using HUMIN PLUS.
- Basal dressing - a rate of 4 to 5 liters of diluted solution per 1 m² at 1:500. Treatment is carried out at least 2 to 3 times in the spring and summer-autumn period.
- For vegetation - 1:1000 solution in the budding phase and again after 10 to 14 days.

After harvest to increase the resistance of plants to winter conditions.
